## **New laser eye surgery hits Perth**

CLEAR Vision Laser Clinic has confirmed the very latest in laser eye surgery technology will be arriving in Perth this month.

The IntraLase laser promises even faster, safer and more accurate results than the traditional LASIK procedure.

The entire procedure takes only 10 minutes and is extremely safe, accurate and has documented success.

According to IntraLase corp more patients in clinical trials achieved vision 20/20 or better when their LASIK procedure was performed.

Patients also reported better quality of vision overall, particularly in terms of their ability to see well in low light such as at dusk or at night.

"Frequently in medicine, when you gain something such as safety, you can sacrifice results," United States Eye Centre ophthalmologist Dr Marc Werner said.
